- Endnote 1      Methodology: Transcription-Mediated Amplification  
This assay detects E6/E7 viral messenger RNA (mRNA) from 14 high-risk HPV types (16,18,31,33,35,39,45,51,52,56,58,59,66,68).
- Endnote 2      Cervical sources are required for HPV testing. If a vaginal source from a patient who has had a total hysterectomy with removal of cervix  
was submitted, please contact the testing laboratory for alternative testing options.  
For additional information, please refer to <http://education.questdiagnostics.com/faq/FAQ129v1> (This link is provided for information/  
educational purposes only.)

**For questions contact Anatomic Pathology Client Services at 877-701-8188 and reference DEPT ID: TA253015253**

**EXPLANATORY NOTE:** The Pap is a screening test for cervical cancer. It is not a diagnostic test and is subject to false negative and false positive results. It is most reliable when a satisfactory sample, regularly obtained, is submitted with relevant clinical findings and history, and when the Pap result is evaluated along with historic and current clinical information.
